

Many useful accessories are available for the FOBA Ceiling Rail Systems, whether it is a ROOF-TRACK system for smaller studios or a MEGA-TRACK for more complex spaces. Two applications with FOBA COMBITUBE and one with the balance point counterweight ROTAI are shown here.

Exceptionally sturdy, stable and competitive suspension set ups can be achieved with the FOBA COMBITUBE System. These can be extended and rearranged at will depending on available space, lamps and further needs.

The trolleys ROTUO are needed for the ROOF-TRACK.

The MEGA-TRACK is used together with either the twin-wheels trolleys RAGIE or the trolleys REGIE. REGIE is for a construction that can be locked in place, the trolley REGIE can be loosened and tightened with the hand brake crank REGIA.

Given its fixing position, the asymmetric weight of the lamp attached to the pantograph would make it slant. Both hang vertically thanks to the balance point counterweight ROTAI between the pantograph and the lamp.
